

Williston, ND – Holiday Stationstore

New Construction

Project Summary:

FFS provided **CastWal** panels on this new building package for Holiday Companies. FBS provided several building packages to the North Dakota area during the oil boom. FFS has been a key supplier of exterior veneer finishes. FFS provided exterior wall panel veneers for the main store, detached carwash and column covers to match. The CastWal Product was a sand finish texture and factory painted in 3 different colors to match the corporate color scheme.

Meet or Exceeding Owners Goals, Values and/or Expectations:

“We chose Fullerton Building Systems again because of our long and satisfactory history with them in panelized construction situations. Although there can be savings on some projects, in most cases, our choice to use them was not a financial decision. We primarily use FBS in situations where traditional stick construction would not make sense or would face significant delays---in places where the labor force is taxed, we find ourselves in a time crunch, or weather conditions would make stick building difficult and slow.” “In every case, we would rate Fullerton an ‘A’---their crews are very well-organized, they are very responsive in the field, and our superintendents have nothing but positive things to say about them. The buildings they build also hold up well, and if there is ever a problem---such as a hit by a runaway car (which happens more often than you think)—we simply call and they fix it promptly.”

John Bareji, VP-Engineering / Holiday Companies
